Python Program: Invalid Age Exception

This PDF contains a Python program that demonstrates how to create and raise a custom exception named InvalidAgeException when the entered age is less than 18.

```python
# Creating a custom exception
class InvalidAgeException(Exception):
    pass

def check_age(age):
    if age < 18:
        raise InvalidAgeException("Invalid Age: Age must be 18 or above!")
    else:
        print("Age accepted. You are eligible.")

try:
    age = int(input("Enter your age: "))
    check_age(age)

except InvalidAgeException as e:
    print(e)

except ValueError:
    print("Please enter a valid number!")
```
